# Biological Soil Remediation Project

## NF-Metal-Smelter Nordenham

# **Biological Soil Remediation**

## **Project Review**

### **Main Research Project „Soil Remediation“**

5-Year Project of Univ. Emden & Univ. Oldenburg – 2003 -2008

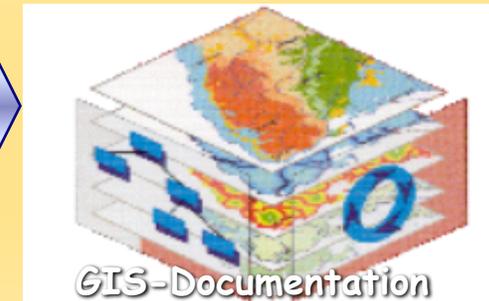

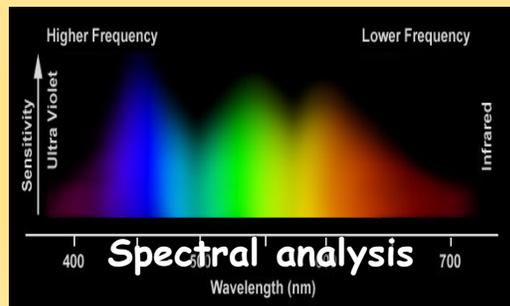

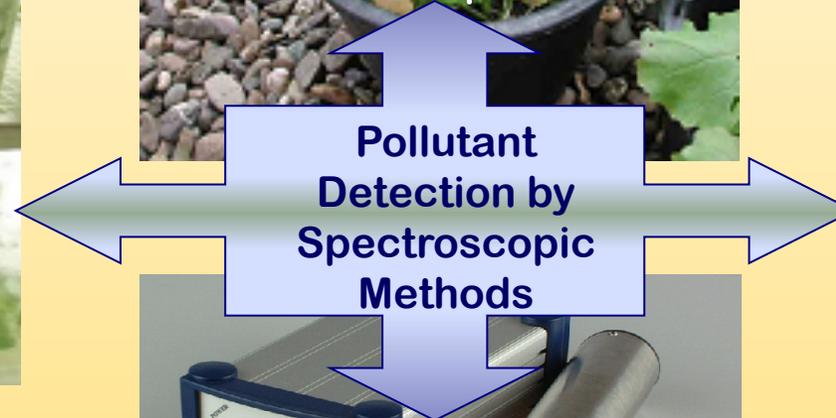

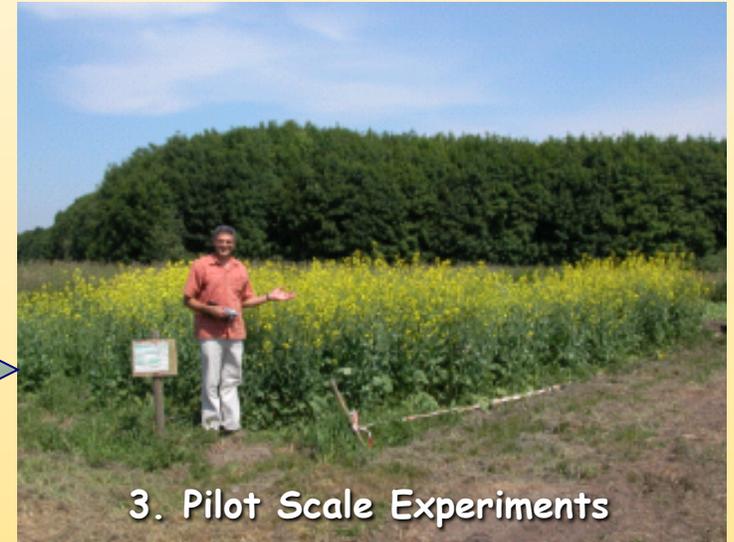

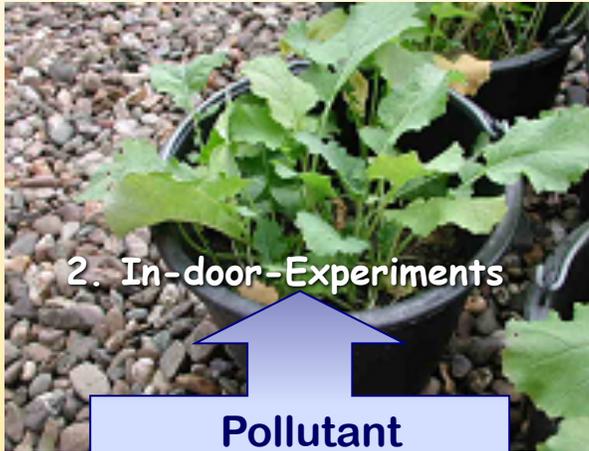

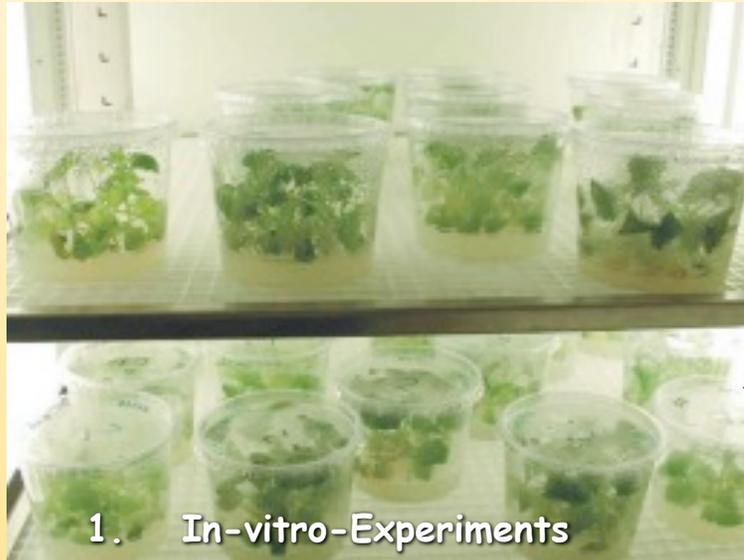

Finances: 817 000 EURO

Scientific Personnel: 4 Scientists / 5 Professors

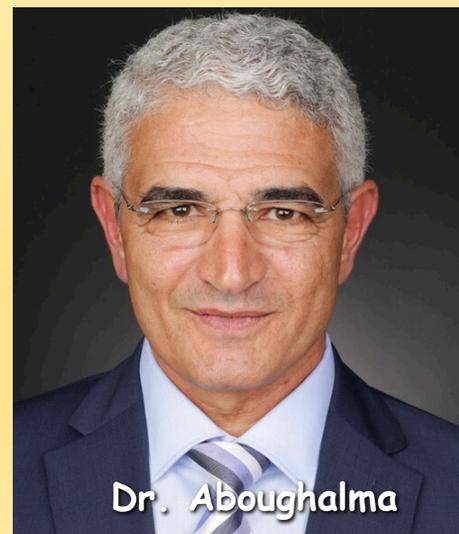

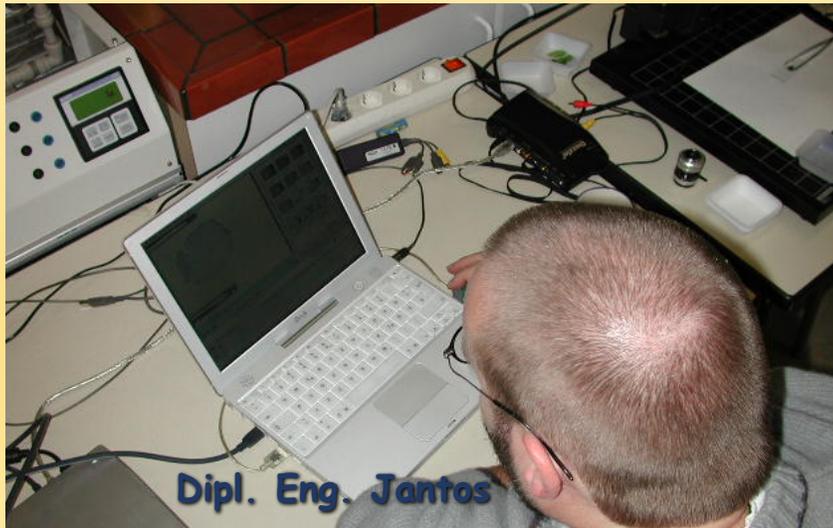

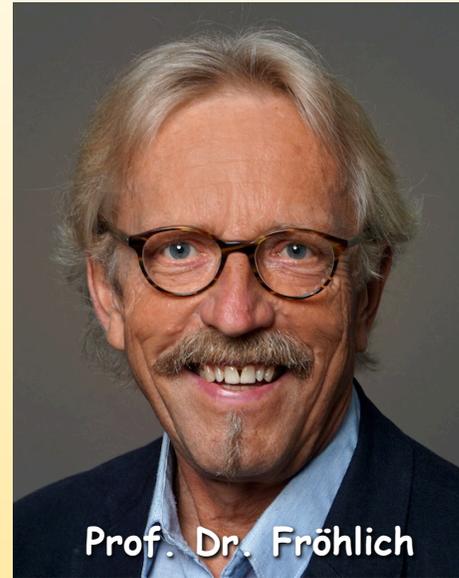

Test Stadia: in-vitro, green house, large scale pilots

- **Verification of the phytoremediation in terms of feasibility and economic aspects**
- **Wide screening of collector plants**
- **Development of spectroscopic monitoring hardware**
- **Observability of the remediation progress**

# Zn – Pollution in Plants

SF > Tob. ≈ Maize > Pot. ≈ Rape

Zinc

Pot. (n=10), Rape (n=17), Maize (n=10),  
Tob. (n=11), Sun flow.. (n=10)

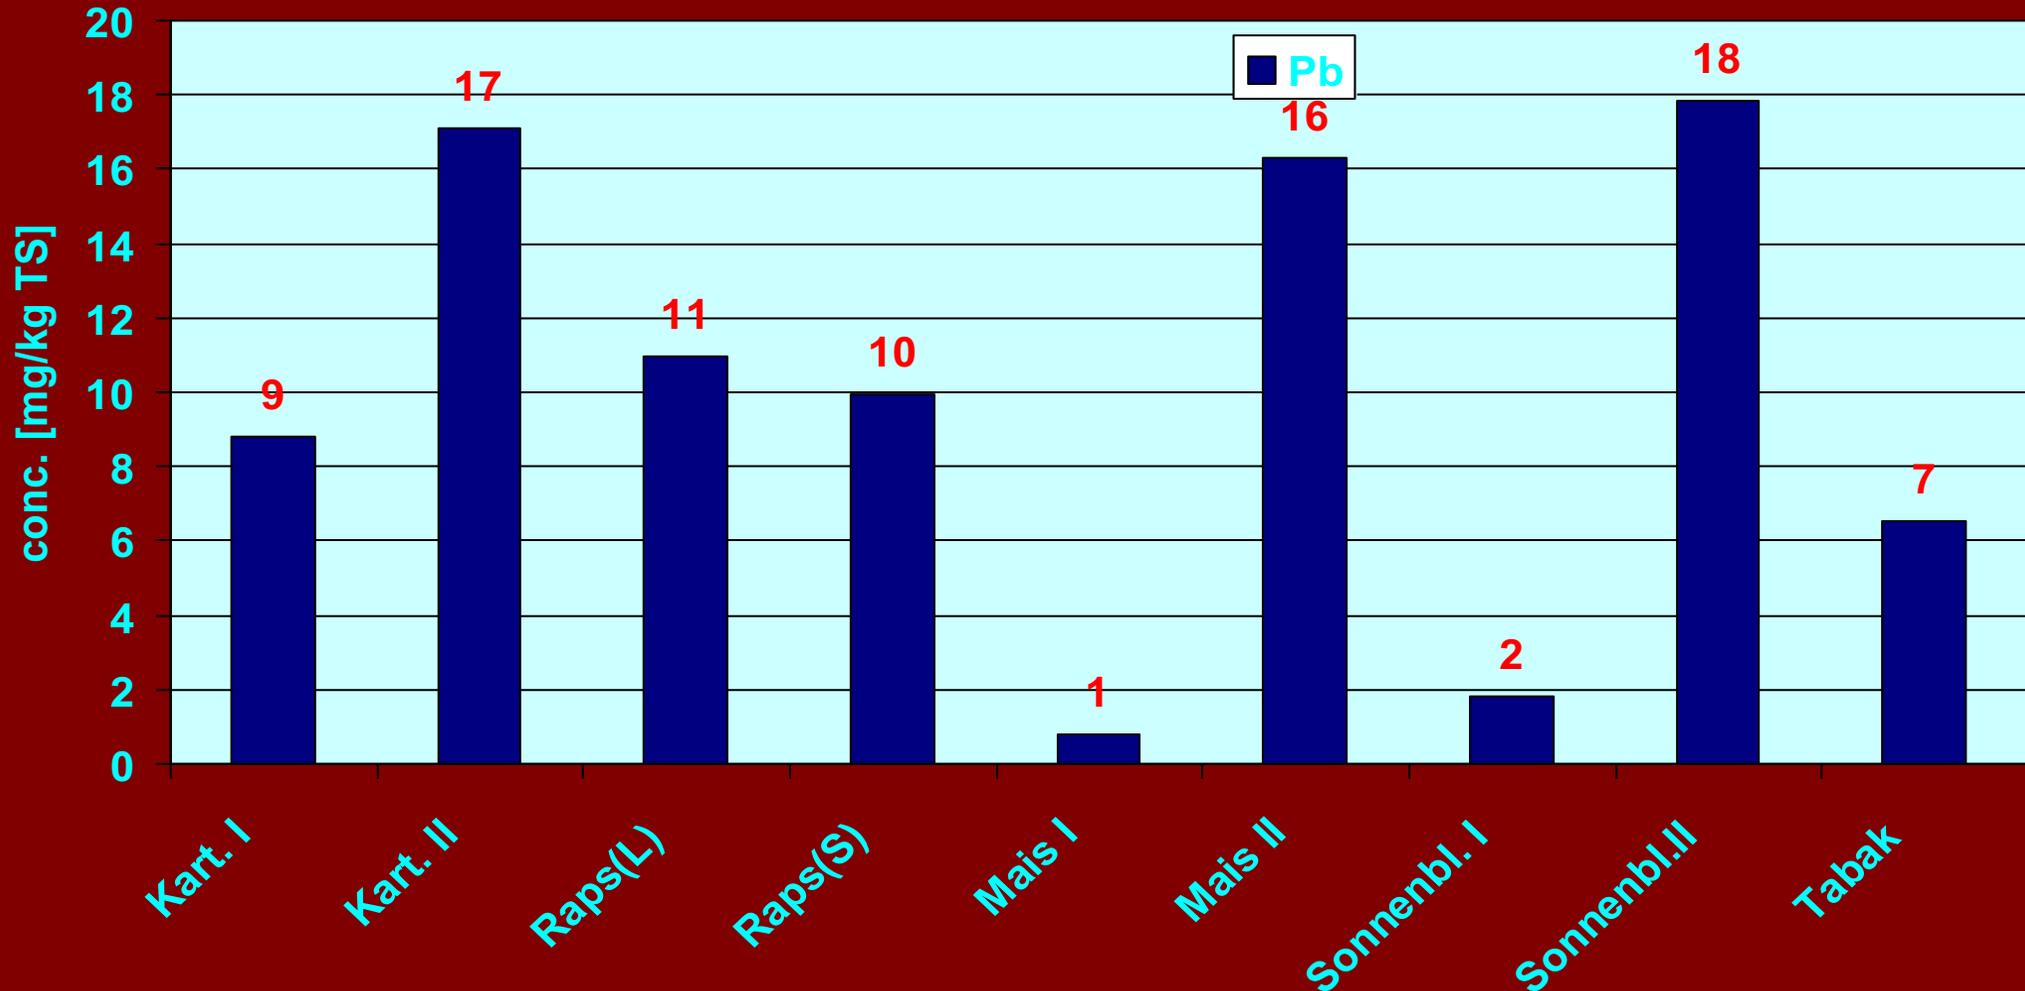

# Pb – Pollution in Plants

SF > Pot. > Maize > Rape > Tob.

Lead

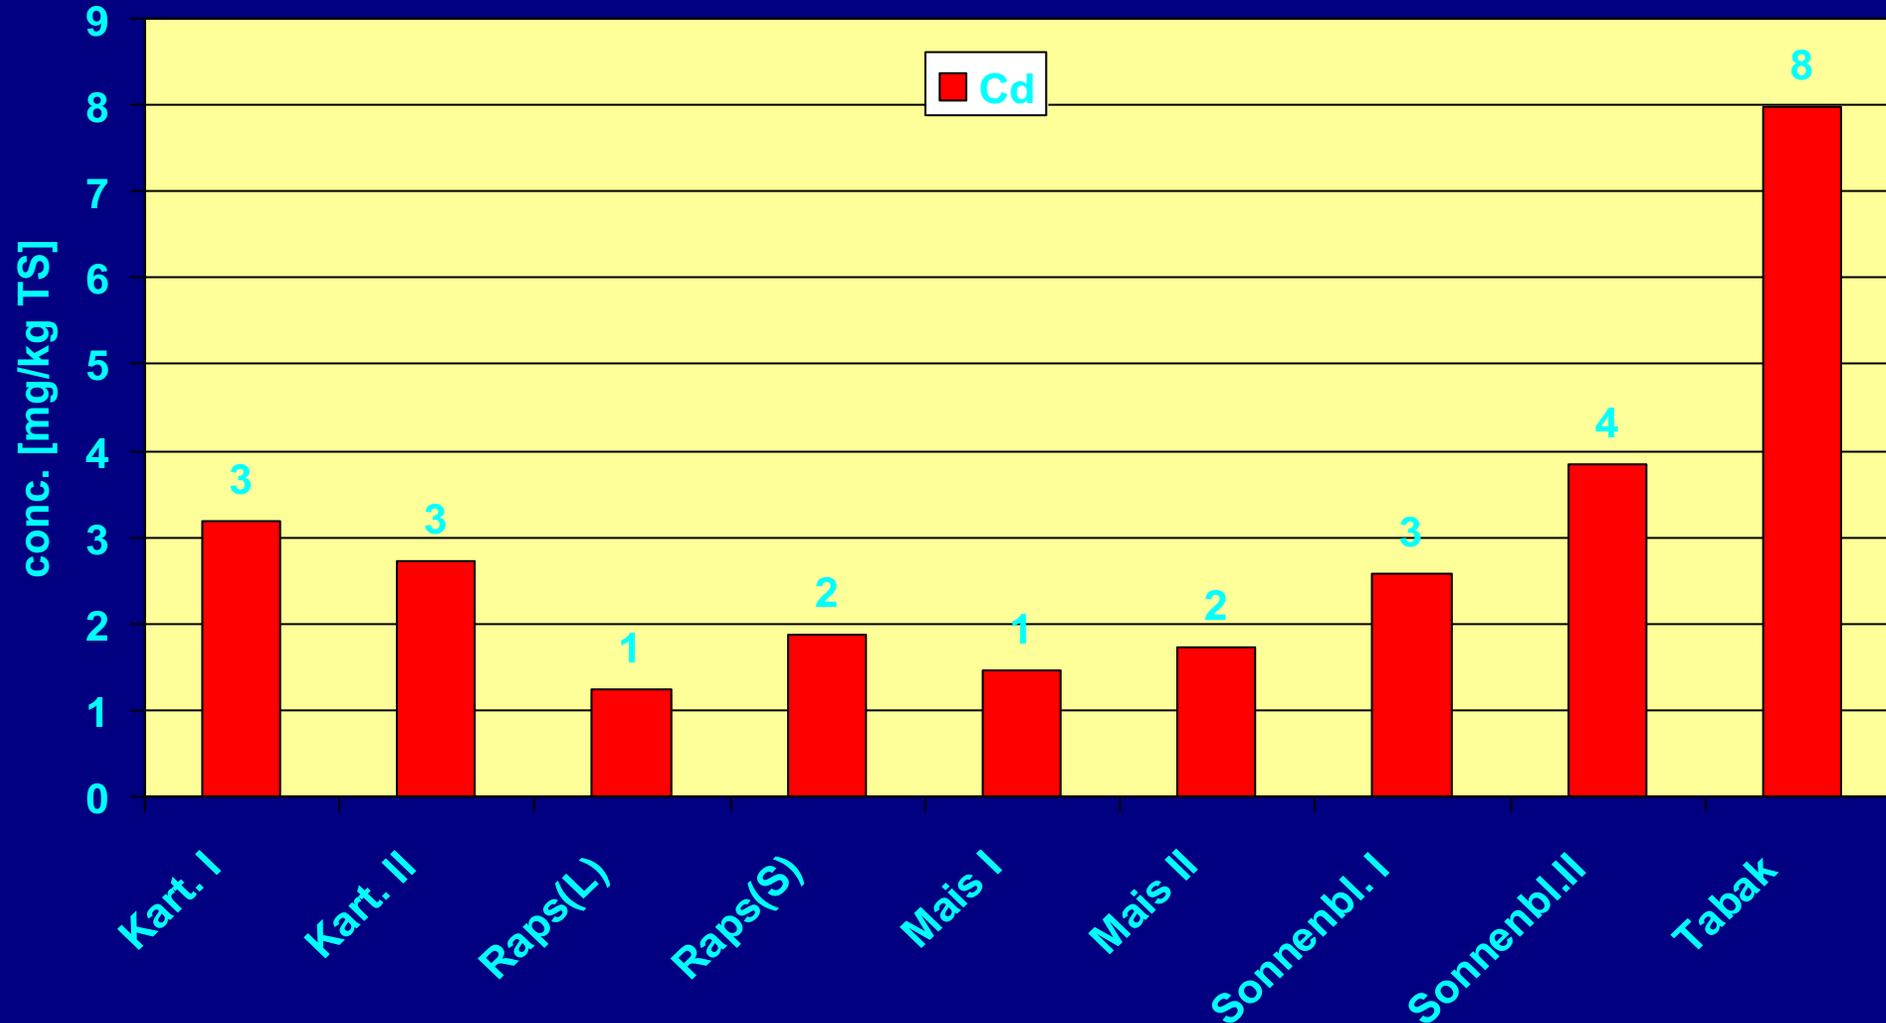

Pot. (n=10), Rape (n=17), Maize (n=10),  
Tob. (n=11), Sun flow.. (n=10)

# Cd – Pollution in Plants

Tob > SF > Pot. > Rape ≈ Maize Cadmium

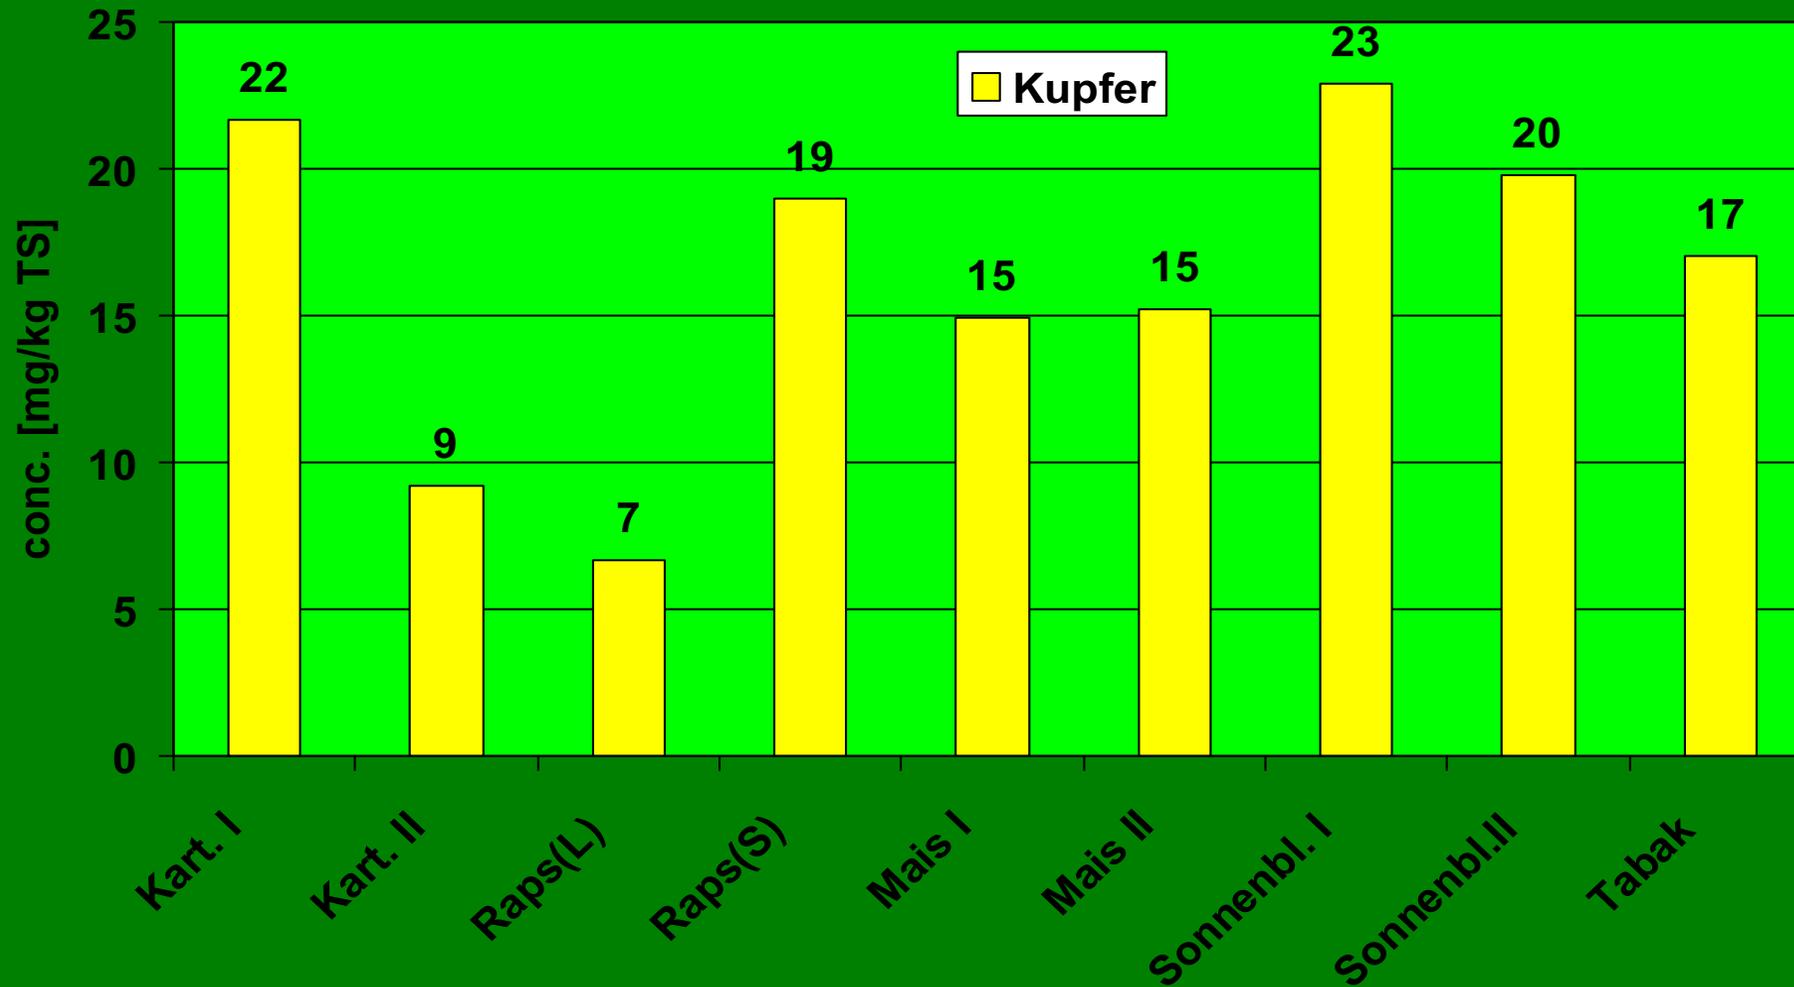

Pot. (n=10), Rape (n=17), Maize (n=10),  
Tob. (n=11), Sun flow.. (n=10)

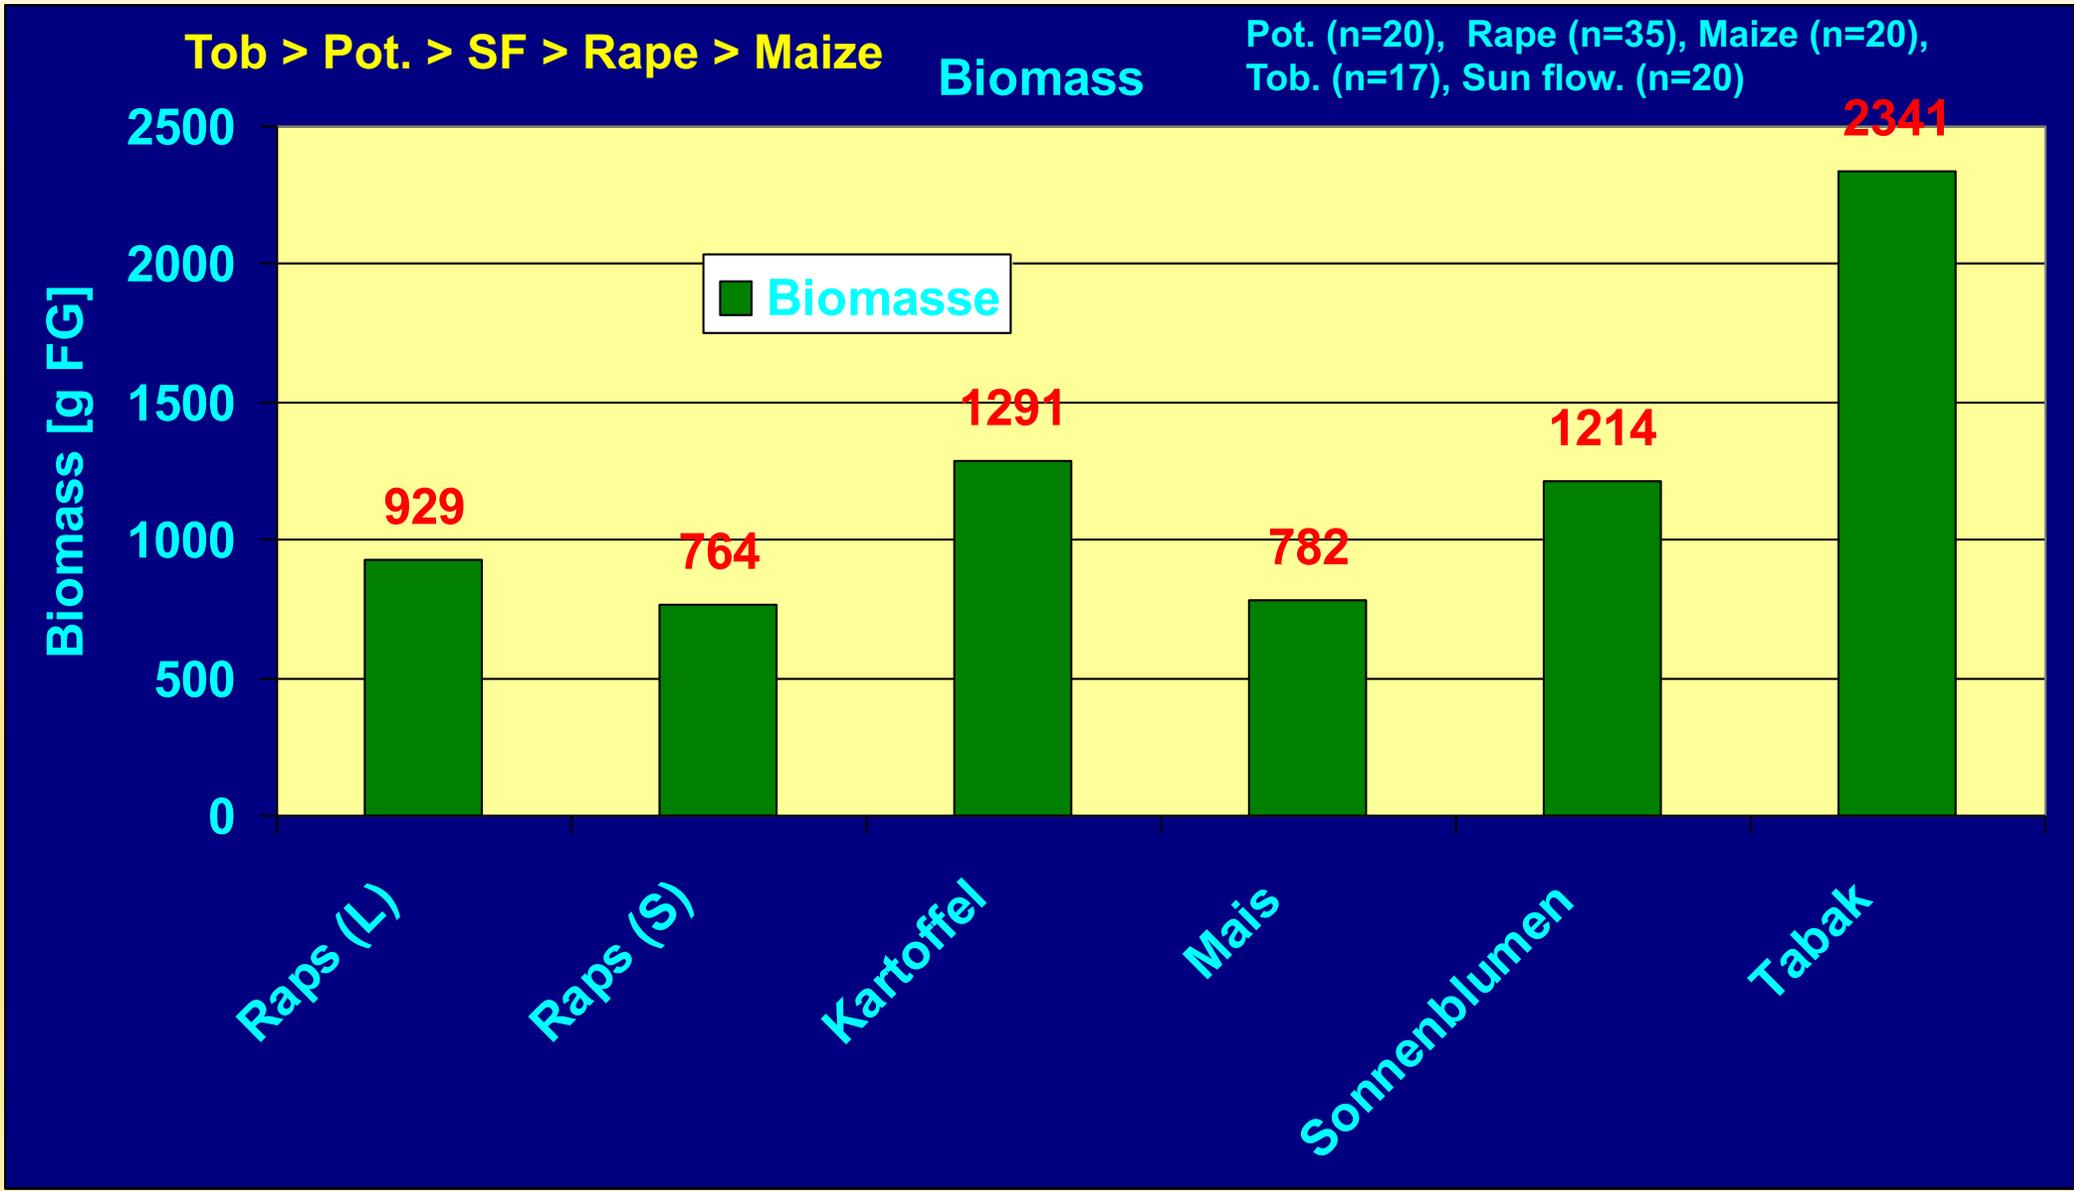

# Cu – Pollution in Plants

SF > Pot. > Rape (S) > Tob. > Maize Copper content

Pot. (n=10), Rape (n=17), Maize (n=10),  
Tob. (n=11), Sun flow. (n=10)

# Biomass Yield

# Conclusions

- **Cd- and Pb-Remediation by plants on moderate polluted levels is possible – Cd $\approx$ 60 mg/kg und Pb $\approx$ 3 500 mg/kg**
- **Sour clay minerals in the soil are predestined to implement Phytoremediation Processing**
- **Moderate contaminated sites could be well suited for purification by Phytoremediation in approx. 15 - 20 years**
- **Geoinformatic Monitoring-Tools are successfully approved in the practice on spectroscopic monitoring of crop pollution**

A photograph of a beach at sunset. The sky is a gradient of dark red, orange, and yellow, with some wispy clouds. The horizon is a dark line. In the foreground, there is a sand dune with several clumps of tall, thin grasses. The text "Thank you for your patience!" is overlaid in the center in a bright yellow font.

**Thank you for your patience !**
